Daniel Coats Senior Software Engineer

New York, NY | (425) 589-8112 | daniel.coats@outlook.com | linkedin.com/in/daniel-coats

Full-stack and distributed-systems engineer building trader-facing tools and backend microservices in C#/.NET, WPF, TypeScript, React, and Next.js. Previously tech lead on the Microsoft M365 cloud platform, where I built global-scale APIs, storage systems and SDKs for products including M365 Copilot, Search, and Viva Insights.

Experience

Susquehanna International Group - Software Developer | NYC | Mar 2026-Present

- Build desktop trading tools and distributed backend microservices in the Strategic Options Trading group using C#/.NET, WPF, TypeScript, React, and Next.js.
- Collaborate with traders and quants on UI workflows, service APIs, and real-time data flows for fast, reliable, and usable trading systems.

Microsoft - Senior Software Engineer (Tech Lead) | NYC | 2019-Feb 2026

- Led a cross-geo effort to reduce M365 Copilot retrieval-augmented generation latency by 85% for user activity queries by profiling critical paths, adding caching, optimizing DB indexing, and redesigning in-memory full-text search.
- Architected and built a time-series storage and streaming API backed by NoSQL storage and distributed caching; delivered about 90% P99 latency reduction and about $2M/year cost savings.
- Shipped a C# client SDK with unified auth, telemetry, error handling, MessagePack serialization, and Zstandard compression for low-latency access to streaming APIs.
- Led three engineers and mentored three interns; guided architecture, engineering practices, on-call readiness, and incident response.
- Previously shipped Outlook on the web note-taking features on the OneNote team using React, Redux, and TypeScript.

AA Insurance - Software Developer Intern | New Zealand | 2018

- Built a text-classification model using scikit-learn to predict customer intent, deployed behind an AWS Lambda API. Developed a React/Redux TypeScript chat UI.

Microsoft - Software Engineer Intern | Redmond, WA | 2017 and 2018

- Implemented D3 visualizations in AngularJS for Inside Sales to visualize customer org charts.
- Built offline data aggregation surfacing results to streamers on Mixer in real time.

CareerWise - Co-founder and Developer | careerwise.school | New Zealand | 2014-2019

- Bootstrapped a SaaS platform for careers advisors. Grew to 22 schools and ~$10k ARR. Acquired by a local company in 2019.
- Led business and product development from idea to launch to acquisition; built the full stack (PHP/MySQL, HTML/CSS/JS) and ran Linux VPS ops, support, and onboarding.

Education

Bachelor of Science (First Class Honors) | Computer Science and Statistics | University of Auckland

- GPA of 3.9 / 4.0
- Senior Scholar Award (top in degree program)
- A+ thesis: “A Chatbot for Customer Service in the Insurance Industry”

Skills

Languages: C#/.NET, TypeScript, Python, SQL
Patterns: gRPC/REST, microservices, SQL/NoSQL, distributed caching, event-driven architectures
Frontend: WPF, React, Next.js, Angular
Infra: Azure, CI/CD, tracing/metrics, memory/CPU profiling, on-call/incident response
